TEMPORARY TRAFFIC MANAGEMENT

TEMPORARY TRAFFIC MANAGEMENT

Once your pipe, trench inspection and any necessary certification is approved we'll plan in your connection. We aim to complete this within **21 calendar days** from the inspection being approved. If there are further certifications required, we will let you know.

In some circumstances, temporary traffic management may be necessary in the public highway. This could include traffic lights, and lane or road closures.

If this work is required, we'll need to apply to the local authority for permission.

In some cases, we may need to provide up to **3 months' notice**. The timeframe and the fee for the work is determined by each local authority and can vary.

We'll let you know if traffic management is required when we send your quotation and discuss what this means for you when we contact you about your planned connection date. We'll work with you closely to minimise any disruption this may cause.
